Samples are taken simultaneously from 6-8 vessels, filtered and collected in tubes, vials or bienplatos. The standardization of the sampling position, attraction force, volume, time and filtration reduces potential sources of variability and makes your test process more efficient. Multi-purpose media selector Make one-touch sample line cleaning when completing a test. Simply connect a water tank to the multi-purpose selector of your XtendTM dissolution bath and start the automated pipe flow routine. Up to 3 additional sources can be connected to replace automatically Sample volumes removed during dissolution tests with multiple time points or to execute pH changes by adding media.
