Cedida: [Kim Schondorff / Getty Images] Tropical forests are some of the most ecologically diverse areas of the planet. They are beautiful natural wonders where we can find species of plants and animals, we are not going anywhere else in the world, but they also play a vital role in health - both human health and health of the whole earth. But we will now play a vital role in the health of tropical forests as well. These various ecosystems are under frequent attacks of illegal deforestation, the effects of climatic changes and other human actions that have resulted in the extinguishing and extinguishing of many spaces that call The tropical forest. These issues are growing so severe and their impacts are becoming so harmful that scientists believe that tropical forests will disappear completely from the planet in 100 years, if we do not begin to take the Corrective action soon. It is crucial for us to preserve what remains. Here it is as you can get involved to protect what left over from our tropical forests. Courtesy of the photo: [ThePalmer / Getty Images] Tropical forests are the most diverse and vivid natural environments in the world. Almost 50% of all plants and animals on Earth live in tropical forests, including thousands of large cats, lizards, birds, monkeys, snakes, insects and other important creatures. Only in the Amazon forest, there are almost 3 million animal species and more than 2,500 sports of trees. However, in tropical forests around the world, due to modes of deforestation, approximately 137 tropical sports are dead daily. And this will not mention the different populations of people who regularly moved as the land of the forest they call the house are devastated. The destruction of tropical forests is directly linked to the decrease in environmental diversity. Although many of us do not live in tropical forests, we trust them for a variety of our daily needs. The tropical forest is responsible for producing a wide variety of fruits and nuts that people consume. Different plants in the rainforest are used to produce medicines and vaccines that millions of people have come to trust. In addition, the forest trading plays a large role in the regulation of the water cycle that provides neighboring communities with potable and air.due for deforestation caused by production The industrial, more than half of the forests of the planet forest are now gone. It is an impressive statistic to be sure, but we are not impotent when we work together to change things. There are a variety of ways we can all help in the fight to save the tropical forests to come. The courtesy of the photo; [FG Trade / Getty Images] Although it may feel scared to take over the question of the preservation of the tropical forest, you will not be working alone. Conservation organizations have been struggling for years to avoid even more deforestation and protect these natural ecosystems and their indigenous populations. If you are looking at your involvement in the fight against deforestation, donating your time or money for these groups can help you put your energy where it matters. The tropical forest network (RAN) prioritizes forest preservation, human rights protection and climate problems. Accepts donations and offers webinars online to empower people with the tools to make change in their own networks and communities. Rainforest Foundation in the US brings voluntaries (and trainees) to assist in the mission of the organization of protecting tropical forests and their inhabitants while working directly with indigenous populations throughout the South Africa. Amazon Watch, which focuses on supporting tropical forests and native people from the Amazon Basin, offer several ways to act, including campaign and donation. These are just Handful of groups you can get involved, donate or support. Other groups that take donations of money and / or labor for similar missions include the international union for nature conservation (IUCN), World Chotforest Fund (WRF), Rainforest Alliance, the conservation conservation and the World Wildlife Fund (WWF). Deforestation results in a large part of the activities related to industrial food. The harvest of products like soy, café, cocoa and palm oil is an important source of deforestation. What does this mean for your purchases and eating habits? Fighting deforestation can begin in the grocery store. Buying fewer products imported from café and cocoa and less food with palm oil or soybeans on all of them can contribute to a more sustainable planet. What should you buy instead? To get, buy locally. Buy local meat markets and local producers café when possible. This can feel like a small step, but when companies use unsustainable practices, a decrease in consumers (and therefore revenue) will forces them to change their modes of producer For something more sustainable.
