How to unlock remotely locked android phone. How to unlock android phone with another phone. How can i unlock my android phone from another phone.

This is the last guide that you can refer to if you have the same question as "How to log into someone's phone without knowing the passcode". No matter the device you are trying to enter is an iPhone or an Android phone, our detailed guide will help you solve the problem. Just read these dedicated solutions for Android and iPhone to learn different ways to access a locked device without password. Want to open your boyfriend's or girlfriend's phone to see if there are any secrets? Looking to get into your old or used phone? You see, this problem is easy to solve. Read this article, you can find the way you want. Then, let's move on to the next part to learn how to log into someone's phone without a password. Here is an overview of the methods. Methods Easy to use Can it save time Will data lost Is there any requirement Unlock service Easy save time Data loss Device required Google/Apple account Unlock tool Very easy Save time Data loss No requirement Factory reset General Takes a lot of time Data loss No requirements My phone Find Easy Save Time Data Loss Samsung Account Required Sometimes you can guess the password if the phone belongs to your lover or family members. If you don't know how to login someone's Android phone without knowing password to guess password, you should try some professional strategies to unlock someone's phone. You should carefully study the tool or approach you intend to use before using it if you want to open your Android or iPhone without too much difficulty. In this post, we will introduce you four strategies and a tool to gain access to someone's phone without knowing their password. Method 1: Access someone's phone without password using Android Unlock Service - Find My Device Google Find My Device service is specially designed for Android users to call, find or delete data from device. Using this method to access someone else's phone is relatively difficult and directly. Before you start unlocking, make sure you have: Your device's Google account credentials Access to the Internet on your device To access another person's phone without knowing the password: Step 1. On any phone or web browser, search for "Google Find My Device" and click on it to open the page. Step 2. Log in to your account and select the phone you want to access from the list of connected devices. Step 3. Now click on "REMOVE DEVICE". Then you can freely access someone else's phone. Note. If your Android version is 7.1 or older, you can click "Lock" to change the password, and then you can use the new password to access the device. iPhone - Find My iPhone This feature is very similar to Google's Find My Device feature. It is also easy to use. Before using, make sure your iPhone meets the following criteria: Find My is turned on on your device. iPhone can connect to the Internet. You know the device's Apple ID and password. If all requirements are met, proceed as follows: Step 1. Go to iCloud.com and sign in to your computer with your Apple ID and password. Step 2. Tap Find iPhone and select the locked device from all devices. Step 3. Then click "Erase iPhone". After successfully erasing iPhone data, you can enter the phone without password. Note. If you can't use your computer right now, you can use another device or app. Way 2: Access Someone's Phone Without Password Using Unlock Tool [Recommend] Android Tool Are you looking for the easiest and fastest way to access someone's phone? PassFab Android Unlocker will help you unlock your friend or someone else's phone. So let's see how to get into someone's phone without password using PassFab Android Unlocker: BUY NOW for Win 10/8.1/8/7/XP BUY NOW for macOS 11 and above BUY NOW for Win 10/8.1/8/7/XP BUY NOW for macOS 11 and earlier iPhone Tool If the phone you want to unlock is an iPhone, then you can use PassFab iPhone Unlocker to access someone's phone without knowing the password. Here are the steps: BUY NOW for Windows 10/8.1/8/7/XP BUY NOW for macOS 11 and below BUY NOW for Windows 10/8.1/8/7/XP BUY NOW for macOS 11 and below Method 3: Sign in Someone phone without password with factory reset Another useful way to bypass someone's lock screen is to reset the device you want to access. However, please note that this method is only suitable for Android devices. Here's a factory reset guide to log into someone else's phone without a password. Turn off the phone by pressing the power button. Then press the buttons to enter recovery mode. First, press and hold the volume up and down button. Second, press and hold the Power button until some options appear. Third, use the volume down button to select "wipe data/factory reset" and press the power button to confirm. Note. Every phone enters recovery mode differently. If you want to use this approach, find the right way to enter recovery mode. Method 4: Access someone's phone without a password using Find My Mobile Another way to access someone's phone without a password is to use Find My Mobile. However, this method is only available for Samsung users. And if so, you need to know the Samsung account of the locked device. You also need to make sure that your Samsung device has opened "Find My Mobile" and turned on "Remote Control". Here's how to log into someone's phone without knowing the password using the Find My Mobile method: Go to the official Find My Mobile website on another device/laptop/computer. Sign in to your Samsung account and select the locked device in the top left bar. Then click "Unlock" and click "Unlock" to confirm the operation. Now you need to enter your Samsung account password to confirm. Later, you will be able to access someone's phone without having to enter a password. Note. There are other ways to log in. Make a phone call without knowing the password, such as B. Using iTunes to unlock iPhone, using a forgotten pattern or safe mode, or ADB to unlock Android. If you want to know how to unlock iPhone with iTunes, you can go to for iPhone. For Android, I recommend that you use the unlock service and the unlock tool because other methods are difficult. Have you found ways to get into someone's phone without knowing the password? After reading this article, you have surely found the right path. However, if you don't know how to solve the problem easier and faster, you can use PassFab Android/iPhone Unlocker. I hope this can be helpful for you. If you have additional questions, you can leave a comment below. Most of us prefer to set up a screen lock for our Android smartphones by entering a complex PIN, pattern or password. However, you will almost certainly agree that such complex locks become a threat in situations where you unfortunately forget the code and fail to decrypt it several times. As difficult as this moment may be, there are some quick fixes that will get you back in touch with your Android smartphone in no time! What you? Well, read on to find out... Method 1: Unlock with a forgotten pattern If you are using a device with Android version 4.4 or earlier, you may be aware of the forgotten pattern feature that you can use to unlock your device. after 30 seconds" will be displayed five times in a row on the smartphone. When you see this message, all you have to do is: Step 1: Click "Forgotten Template", at the bottom of the lock screen. Step 2: You will be prompted to enter your main Google account details i.e. username and password H. Click "Next Step" when finished. 3. You can draw a new gesture to unlock your phone. > When finished, click Next. Step 4: Redraw the pattern > When you're done, click "Confirm". Step 5 Now you can unlock your phone with a new gesture. You can follow a similar process if you forgot your PIN to unlock your device. A Method 2: Android Smart Lock (Android 5.0 and later) Smart Lock is a sophisticated security feature that is available on many of the latest Android smartphones. What makes Smart Lock the coolest feature of an Android smartphone is that it allows you to automatically unlock the device when the phone is with you, or perhaps when you are at home, or when you turn it on with any Bluetooth device such as a smartwatch, or a Bluetooth headset with a smartphone. In other words, you don't have to unlock your smartphone every time with a PIN, password, or a combination of the two. Sound interesting? Here is how you can enable and use this amazing feature on your Android smartphone. Step 1: Go to Settings > Security & Location or Lock Screen > Smart Lock under Security & Location. Step 2: Require a PIN, password, or pattern to unlock Step 3: You will see several options to choose from. Contact discovery Trusted places Trusted devices Voice matching Let's see how Smart Lock will work with each of the above options enabled. 1) Body Detection: If you enable this option, your phone will remain unlocked as long as you keep it in your hand, pocket or bag. However, if you place the device on a table, for example, it will automatically lock within a minute. Also, on some smartphones, you will notice that the body contact detection feature also detects your stride? Body contact detection automatically records accelerometer data about how you walk and detects when you are wearing the device. However, disabling body contact detection will delete the collected gait data. How to enable body contact detection: Step 1: Click on body contact detection. Step 2 Toggle Body Contact Detection 2) Trusted Locations: Your trusted location can be outside the walls of your home, such as your workplace, gym, etc. It can leave your device unlocked up to 80 meters away. In cases where you want to add your home as a trusted location: Step 1. Click on the Trusted Location option, Step 2: Click "Home". Step 3. You can enter your home address or click on the map to mark your exact location. Note. Trusted places work best with Wi-Fi. This information will be updated automatically. in your Google search. Google Maps 3) Trusted device: The trusted device option is required to pair your smartphone with any Bluetooth wireless device, such as a fitness tracker, smart watch, or Bluetooth speaker. Connecting your smartphone to one of these devices will automatically unlock your phone. However, the only downside to enabling this option is that the range of a Bluetooth connection can be up to 80-100 meters, and anyone within that range can unlock your phone when it's connected to a trusted device. Step 1: From the Smart Lock menu, click Trusted Devices. Step 2. Click Add Trusted Device. Step 3 Click a device in the device list. Step 4. Optional. To remove a Bluetooth device, tap the device you want to remove. Then click OK. 4) Voice Match: Want to unlock your smartphone with your voice? Smart Lock also lets you do this with Google Assistant. All you have to do is: Say "Ok Google" on the secure lock screen. When Google Assistant recognizes your voice, it will automatically unlock your smartphone. Here's how to turn on voice recognition to unlock your smartphone: Step 1. Press and hold the home button on your smartphone. Step 2. You will find a small round symbol (resembling a compass) - tap it. Step 3: Tap More (three vertical dots at the top right corner of the screen) > Tap Settings > Tap Assistant in Settings. Step 4: In the Assisted Devices section, click Phone.Unlock with Voice Match option OR Step 1: In the Smart Lock section, tap on the Voice Match option. Step 2: In the OK Google Detect section, click Unlock with Voice Match - you will be asked to enter a PIN, combination or password. continue. A security message will appear on the screen, alerting you that this feature is less secure. > Press OK to continue. Note. This setting can be a little less secure as anyone can record your voice to unlock and access your phone, or someone with a similar voice can try to unlock your smartphone. Method 3: Third party applications Nowadays you may have noticed that many smartphone manufacturers develop their own security features. For example, let's take one of the most popular smartphone brands - Samsung. Many of us are familiar with the Find My Mobile software, an integrated security software designed and developed by the brand itself. As the name suggests, this software helps track the current location of the smartphone if the owner stole or lost it. That's not all though, it also allows you to unlock your device if you want to bypass the lock screen process. However, you will need a Samsung account for this. Here's how to unlock your smartphone with Find My Mobile. Step 1 Visit and sign in with your Samsung account. Step 2: Choose the "Lock my screen" option on the left corner, enter your new PIN in the corresponding field and then tap on the "LOCK" option. After a few seconds, the password will be changed to the new one you set and the device will be unlocked. Method 4: Restart your phone If the lock screen you want to avoid is a third-party app, booting into safe mode is the easiest way to bypass it. On most phones, you can boot into safe mode by opening the power menu on the lock screen and then pressing and holding the power button. Select "OK" here when asked if you want to boot in safe mode, and after the process is completed, the third-party lock screen app will be temporarily disabled. From here, simply wipe your data or uninstall your third-party lock screen app, then restart your phone to exit safe mode again. When you return, the annoying screen lock app will be gone. Method 5: Emergency screen lock If your smartphone is running Android 5.0-5.1 and all of the above options do not suit you, you can try another possible option. screen lock failure. To do this, follow these steps. Step 1. Tap "Emergency Call" on the lock screen first, and enter 10 stars (*) in the dialer interface. Step 2: Double click - tap

the stars > select Copy. Step 3: Paste the copied text in the same place as the number of characters entered. • Repeat this process until double-tapping the field no longer highlights the characters entered in the dialer interface. Step 4. When you're done, go back and open the camera app shortcut at the bottom of the lock screen. Pull down the notification bar -> Tap on the Settings app. Step 5: You will be asked to enter a password. Paste the copied password several times until the lock screen freezes. Step 6. Now you can access the smartphone interface without data loss. Note. This method will not work on any third party lock screen. Method 6: Factory Reset If access to your phone is all you need, and you don't mind saying goodbye to all the data stored on your device, a factory reset is your choice. A factory reset permanently erases all data on your device and gives it a whole new look. The factory reset process may differ from device to device, but the end result is the same. Step 1. Turn on the device and press and hold the button combination to access the boot menu. (e.g. samsungThe S6 requires you to hold down the power, volume up, and home buttons.) Step 2: If you can't find the right combination, information online should be easy to find. For most Android devices, these are usually Power, Volume Down, and Camera. Step 3: Use the volume buttons on your phone to move up and down and use the power button to confirm your choice. Step 4: Find the option to wipe data / restore factory settings. Step 5: Confirm that you want to wipe your device and your phone should now begin the process. (This may take a few minutes depending on the amount of data on your phone.) Step 6: After that, your device will reboot without a password, but also without data. Note. If it's a new smartphone, you'll be prompted to sign in with your Google account and the password you used on the device before it was reset. We often forget the password for our devices and the person can be wrong. So, the next time you find yourself in this situation, you can try any of the above methods to quickly unlock your smartphone. If you have ever found yourself in this situation and used any of the above methods to unlock your device, please share your experience with us. And if you know other ways to unlock your Android smartphone, please share them with us. If you liked this article, then share it with your family and friends.
