The Euphoric Apex Ganjanath (@ganjanath) reported 11 hours ago @sans mentchir @CircaAzul @monsterhunter Maybe the deviant system was clumsy and clunky? I love the monsters and the fights, I have 0 problem fighting a monster hundreds of times *for pure enjoyment. People (not just myself) have a problem fighting 18 deviants hundreds of
times for EACH monster to acquire useless sets- The Euphoric Apex Ganjanath (@ganjanath) reported 11 hours ago @Taiwun3 @CircaAzul @monsterhunter as its only a tiny piece of the puzzle of whats gone on with items. Gourmet fish is broken in rise, thats just as small as the drinks but it heals red HP faster and overheals/autoheals you when full
HP. All the healing changes dont mean much when you can just eat G fish D: Akume le F O X (@AkumeUwU) reported 11 hours ago @CircaAzul @monsterhunter reason being? like what is even your point? 'oh i don like game so game shouldn't exist' Rise got issues, any game does but doesn't warrant it being a mistake because i am very glad Rise
exists and so are many other not as dumb people like your type of player DerpyMudkip (@DerpyMudkip2) reported 13 hours ago @theraccoon313 @darkside sharp @monsterhunter I just said funny lol whats the problem "fun"
changes from person to person. Like I would enjoy this if I knew there was something rewarding at the end Ventus (@Mizutrie) reported 14 hours ago @monsterhunter Just have fun hunting monsters. No need to whine about the fact that you don't have a new weapon or broken *** set to work with. It'll come up with time. Just be patient. It's sad that
people would complain about EVENT quests of all things. Lighttime (@Lighttime 1717) reported 23 hours ago @ScourgeHH @WolfieSavageSSS @monsterhunter But his fight is pointless which is pretty much the problem with rise. pointless battles. Epitaph Infinitum (@EpitaphBlade) reported 2 days ago @Cojiro the Blue @Akers813 @monsterhunter But his fight is pointless which is pretty much the problem with rise.
400 hours in but now there's nothing to achieve? That sounds like a *you* problem. You wanted. It seems like the game already offered more than enough. Magnus273) reported 2 days ago @monsterhunter
Friendly reminder that not even G rank will save or fix Rise. Game is too awful at this point for it to matter. Ruby "Little Red" Hero [ ] (@dontwanabeahero) reported 2 days ago @monsterhunter okay this one seems a lil odd litterly nothing like you can already fight Kushala in the desert i was really hoping rise wouldnt get the world issue of 100
events but most of them are litterly just the basic hunts every other event was fine but this one just kinda sucks Cojiro (@Cojiro the Blue) reported 2 days ago @Akers813 @monsterhunter See thats the problem, we did enjoy it. For about 400 hours and then right back to previous titles, repetitive grinding is one thing but once there's nothing to
achieve it becomes meaningless. BrettZ (@BrettZ54340352) reported 2 days ago @Deshrasden @monsterhunter I don't really care about Fatalis tbh. I just want Alatreon. Plus they don't need broken stats, but can still be very strong. Uncle (@Lumbago999) reported 2 days ago @Obba40 @GaryW4LL @monsterhunter It's not a live service game, but
it's a $60 monster hunter game that was incomplete on release and still feels incomplete after the "post launch updates" People have all the right to expect more for what they paid for Shuffle_Fox) reported 2 days ago @monsterhunter Oh, that's why I got another update pop up earlier. I thought it was just a glitch showing the prior
update pop up again. Chrono S (@AntiEmu1) reported 2 days ago @Obba40 @GaryW4LL @monsterhunter It is not a life service game, that's for sure. But it still needed two more major title updates that shifts the meta completely with each and adds better min maxing potential before we get ultimate expansion. The game feels empty. #ResidentEvil
(@DisasterLordZ10) reported 2 days ago @monsterhunter ****** answer me! intense speculation that the US government would reduce or even cancel the successful electric vehicle manufacturers, has had a major impact on the US electric vehicle market even if it is still just a fraction of the traditional
market at the moment. However, it seems that the US government is looking to commit around $2 billion towards transportation research to reduce the country's dependence upon petroleum. What does this mean for electric vehicles? The US government, as we touched on above, has been a significant financial supporter of the EV market, both with
initiatives to consumers and government funding to manufacturers. There was growing concern that the government was looking to reduce this, in light of budget pressures, but it seemed as though President Obama has gone in a very different direction. While it must be said that not all of the $2 billion to be made available will go on EV research,
with some going on natural gas, bio-fuels and hydrogen fuel cells, there is no doubt that electric vehicles will grab a decent share of the funding. The idea now is to develop current battery technology which would eventually increase electric car journey capacity beyond the 150 miles, per full charge, offered by the new Nissan Leaf. Battery technology
has been left behind While there has been significant investment in electric vehicle technology the fact is that investment in battery technology the fact is that investment in battery technology alone has been left wanting. Many experts believe that EV manufacturers made a major error in diverting the vast majority of their funding towards the actual cars themselves as opposed to battery
technology. As a consequence battery technology has fallen well behind developments in electric vehicles are the way forward and has made significant financial and commercial investments in
the sector. A number of Japanese electric vehicle related companies which have struggled to survive amidst the ongoing economic uncertainty. Will this make a difference? There is no doubt that a $2 billion investment in the transportation
industry, looking for various alternatives to petroleum, will make a significant difference going forward. The reality is that EVs are now readily available at the moment. It would make sense for the US government to focus a significant part of this
funding and energy upon the electric vehicle market to give it that final push to hopefully crack the mass market. Conclusion President Obama has certainly surprised many people with the announcement of a $2 billion investment into alternative transport fuels. The investment will come from funds raised by oil and gas leases granted by the US
government to a variety of commercial companies. In many ways the petroleum industry will literally be financing alternative sources of energy in the future. How long this will take is unclear at this moment in time. Entries Tagged speed read Inside Politics Tags: speed read Your daily political news highlights, after the jump... Tags

Entrepreneurship Gisele Aubin offers an honest look at what it means to change careers mid-life and how she personally found her own bliss. "In Transit" is not your typical step-by-step guide to success type of book, but rather, it offers a realistic, emotional, and ultimately, messy but satisfying story of how one woman figured out what she wanted to
do with the rest of her life. And readers will find empathy, hope, and ideas to move forward in their own careers in these pages. Gisele Aubin is a woman after my own heart. She has known the stress of the corporate world, and when her job came to an end, rather than feel discouraged and unemployed, she saw it as an opportunity to take a
sabbatical from working and instead spend the time reinventing herself, trying to figure out whether she would do if she did become an entrepreneur-what kind of business could she start? And a few times, she felt swayed toward returning to a
regular job as different opportunities arose, but each time, she felt her spirit rising up against the idea, so she continued on her transition to self-employment, or as she calls it "you-are-on-your-own-and-good-luck-with-that!" Anyone who has worked in the corporate world knows the stress it can cause, the demands coming from every direction, and
the overall craziness of it all. While I never had a job like Gisele where I had to travel a lot, I could completely relate to her constant frustration of trying to keep up with communicating with people in a world that never stops communicating with people in a world that never stops communicating. "The long flights are the best. I totally zoom out from the cabin around me, and zoom in on my screen. Those
four and a half hours in the air are like eight in the office. Where else do you have the luxury to be shielded from the endless phone calls, emails, instant messaging, and whatever other ways people have to reach you? The day they allow mobile phones and Internet access on all flights is going to be the day I stop commuting, I hope." Furthermore,
Gisele's corporate life was so busy and filled with travel that she rarely had time for herself. She admits that she has hardly any personal life or excitement, always keeping sadness at bay with humor, such as when she comments that "You know you are in serious need of a life when excitement is a tossed salad at an airport terminal." Even her
weekends were filled with work: "I did not ever, ever catch up unless I played alone while nobody else was. The only time to get ahead was the weekend or the middle of the night. Then, of course, I might have won the catch-up game that day, but lost on other fronts such as sleep, relationships, and health just to name a few." And then the company
she works for suddenly is sold, giving her the choice to stay with the new company or the opportunity to choose unemployment, or rather a one year sabbatical to rediscover herself and transition into self-employment, or rather a one year sabbatical to rediscover herself and transition into self-employment, or rather a one year sabbatical to rediscover herself and transition into self-employment.
is simply to have fun again-as when she and her sister surprise her parents by showing up for breakfast in their pajamas-and finally, she figures out just what she wants the rest of her work and personal life to look like. Watching Gisele go through this transition was fascinating for me. After her years in the corporate world, she was somewhat like an
adrenaline junkie, and she constantly refers to the hamster in her brain that will not stop but always needs to be busy, planning, scheduling, figuring out what's next. She knows she needs to learn to relax and stay in the moment, but as with most of us, that's easier said than done, and precisely why I and so many others will relate to her story. Many
books have been written about how to become an entrepreneur and build a business of your own from the ground up, but few discuss it from a personal perspective. "In Transit" is more like entrepreneur therapy where we get to see a woman's daily frustrations and emotions during her career transition-almost like we are watching a reality show
about becoming an entrepreneur. Gisele carries it all off with pluck and a good sense of humor that will leave readers laughing, relating to her, and ultimately, feeling motivated to follow their own dreams. If you're ready to take the leap to self-employment or make any other major life change, you will find a kindred spirit in these pages who
understands where you're at, where you want to go even if you don't, and who can show you how she managed to get there. Get ready for a career and life changing experience. The Finnish Bed), by ethnologist Leena Sammallahti and researcher Marja-Liisa Lehto (SKS 2006), is an illustrated
history of Finnish sleeping arrangements, from simple benches along the wall, once common in many farmhouses, to elaborately carved and cushioned laps of luxury from upper-class homes. Sammallahti wanted to place the Finnish bed. "Ever since
I was a child I have not slept very well, so the bed occupies my mind in this respect", Sammallahti says. Her recently-published book, Suomalainen sanky ("The Finnish Bed") presents the evolution of Finnish beds from solid sleeping platforms to ornate canopy beds, and to models that can also serve as sofas as well as of bunk beds. The beds of the
Tornio River Valley stand out in their magnificence says Sammallahti. "They have elegance and richness, which I have always loved". The seeds of the book were sown in the late 1960s when Professor Niilo Valonen, a legend in Finnish ethnology, used students to photograph the interiors of farm homes, creating an illustrated record. Sammallahti was
one of those young student assistants at the time. "Once when I took pictures of furniture, a salesman selling new furniture. At that time it was used as firewood," Sammallahti recalled. With her book on Finnish beds, Sammallahti
feels that she has completed one aspect of a major project that her mentor was not able to finishin hbislifetime. Valonen's intention had been to study the villages, yards, buildings, and interiors of farm living in Finland. Sammallahti lives in Pori in an old row house originally built for factory workers. In Helsinki she has her "travel suite", created from
the old sauna building at the back of a traditional 1950's house in Herttoniemi. The furnishings of both homes give an indication of the profession of the person who lives there. "Actually, only the computer is new", she laughs. "Already as a schoolgirl, I went to auctions, looking for old objects." The author's favourite bed was inherited from her
grandmother. It is a model that opens from the side. The wood is carved, showing pictures of doughnuts and biscuits. However, usually she sleeps in a pine bed from the 1920's, as it is pleasantly wide. A bed is where people are born, die, and make love. In medieval times, taking a bride to bed was actually written into the legislation: a marriage was
considered valid only after it could be proved that a couple had spent a night under the same sheets. Sammallahti's memories of bed also surge with intimacy. "I remember how my grandmother's sister, a midwife, took me, a child crying for lack of sleep, next to her under sheepskin blankets. And how my fiance and I shared a Heteka metal frame bed
in the hot attic of a summer cottage." Sammallahti has been retired now for a few years but continues to do research. "After being relieved of the obligations of my job, I have dived into the sublime deep waters of a researcher." The aquatic metaphor is no coincidence. The author is the descendant of a maritime family with origins in the outer islands
in the Gulf of Finland, which Finland lost in the war to the Soviet Union. "As a child I was allowed to go with my father in a steamship to the harbours of Europe." Sammallahti received her doctorate from the University of Helsinki in the early 1980's. After that, she worked at a
number of jobs, including that as the head of the Finnish Maritime Museum, and the museum sector grew along with Finnish prosperity. Now it is sad that it is necessary to reduce funding", she notes. "Museums are the only organisations that store old objects. And with them, we tell about values
and meanings - spiritual matters." One of the Finnish museums in which you can see these self-same beds for yourself is the Lyytikkala Museum Farm in South Karelia. The Lyytikkala Farm's history began in 1722 and it was opened as a museum in 1989. The old farmhouse has fixed benches built along the walls of the main room (the tupa) while
along the back wall there are beds similar to some of those shown above. In years past, the sons of the owner, the farm-workers and visiting guests slept here at night (in summer, they slept in the farm sheds). Rehtaeh Parsons report wont lay blame says panel Nova Scotia (Note:CBC does not endorse and is not responsible for the content of external
on Wednesday that outlines the scope of their review. They said the panel will not assign blame or publish the names of the people it speaks to in its review. Rehtaeh, 17, killed herself last month after she was allegedly sexually assaulted and cyberbullied. According to the panel will ask: The panel will also review support services for
people who are bullied that are provided by schools, the IWK Health Centre in Halifax, the Capital District Health Authority and the police. It's due June 14. The provincial government has set aside $70,000 dollars for the review. "We know blame is not on the table but we would like to see some accountability," said Glen Canning, Rehtaeh's father.
 "We're hoping to find answers to what procedures are in place to help a child going through a traumatic experience like our daughter went through." Meanwhile, the man who led Nova Scotia's taskforce on cyberbullying said creating new laws to tackle cyberbulling should be a last resort. Wayne MacKay, a law professor at Dalhousie University,
currently have. Are we applying those creatively and appropriately in the new cyber world?" he said Monday. "There are things there that could be more effectively used. There's kind of a starting idea that we shouldn't make the criminal code any bigger than it needs to be." He said adding laws also risked limiting free speech and infringing on
privacy. MacKay said there are a slew of laws that can be used against some online harassment, including laws against criminal harassment, including laws against criminal harassment, including laws against some online harassment, including laws against criminal harassment, including laws against some online harassment against some online harass
Parsons are not only not acceptable, but are not even the kind of things people would contemplate." He cited a senate study that said the federal government can also play a key leadership role in setting and coordinating a national structure, because it's
really funding, because they tend to have more money, and coordinating and working with the provinces," he said. Ottawa also plays an international role in protecting children abused for exploitation images. Wolverine _ Typical Yet Enjoyable World Cinema is full of super hero movies. They never fail because there is always some part of the audience
that will admire them. Critics can keep ranting about the story, direction or anything but fans couldn't care less. I personally am a huge fan of these films and I appreciate good cinema too. Therefore, it is through personal experience, I can say that fans usually just need to see their favourite super hero fighting all around and it is enough to make
them go gaga and the producers to earn profits. One of the most recent super hero films was The Wolverine. This Hugh Jackman starred film was probably eagerly awaited since the day it was announced that there is going to be a sequel to the first one. One of the most beloved X-Men visits Japan to say goodbye to an old friend but finds himself
trapped in a conspiracy. This film has earned a lot of dollars throughout the world and was released in various languages. And it sure was a treat for the fans. This film had everything needed to satiate the craving of a Wolverine fan; dangerous-and-gasping-loudly-in-the-theatre-action scenes, eye-widening new (and creepy to some) gadgets and some
new troubles for the hero to handle. The action scene on the bullet train will scare you, excite you and you would be on the edge of your seat. Despite of the presence of such elements, this film still lacked a strong story line. It was quite disappointing to see yet another saving the damsel in distress story line. The presence of Hugh Jackman does for
once makes you want to ignore these things but not entirely. With each film about such super hero movies like to revolve around the theme of saving the heroine and eventually falling in love with her. Wolverine was nothing different. He goes to
Japan, finds himself in the midst of a power struggle and does anything and everything in his power (which by the way, really has reduced) to save the life of the beautiful Japanese heiress. Crossing various hurdles and a dangerous new villain, Viper, Wolverine successfully saves Mariko from the conspiracies and plots against her. This sounds like any
other movie you must have watched or heard about. The end of this film, however, is a huge surprise and for me is the highlight of the film. For die-hard X-Men fans, this will easily be a celebration deserving moment. It will definitely leave the fans wanting and waiting desperately for this series' next installment. I love super heroes and a super hero
will always be one, no matter what. What I really feel is that there are a lot man ways to glorify a hero's power than just showing him save a woman's life. And it's not like we haven't watched such films, just a little more would be nice. What Kind of Psychic Are You What sort of psychic abilities do you have? What kind of special powers do you secretly
crave... or truly posses? Do you often get a sense of things about to happen, and feel them before they do? Or maybe you have incredibly detailed, rich and vivid lucid dreams? Maybe you have incredibly detailed, rich and vivid lucid dreams? Maybe you have incredibly detailed, rich and vivid lucid dreams? Maybe you have incredibly detailed, rich and vivid lucid dreams? Maybe you have incredibly detailed, rich and vivid lucid dreams? Maybe you have incredibly detailed, rich and vivid lucid dreams? Maybe you have incredibly detailed, rich and vivid lucid dreams?
types of psychic abilities and some of the very easiest ones to access are those that are the most fun to experience, and explore! Curious to know a bit more? Let's take a closer look, immediately below. The most common type of psychic abilities that MOST people already have? Some degree of precognition in available to everyone. The sense of things
yet to happen... and then when they DO, it's hard to explain away as a good guess or chance, simply because you KNEW in your bones that it would. (Often things that are NOT common and are hard to explain as likely or merely good guesses). I call this ability the power to FEEL THE FUTURE, and to some degree, in my own work, most people I see
can tap into it with practice. Other common psychic powers that can be completely LIFE changing when you wake them up? The ability to see and speak to spirits is a big one, and something that I think we all posses as well. The truth is, being able to communicate with the energy and emotions of those who have crossed over is NOT all that special or
rare. For example - some studies show that 80% of people who lose a child will have an experience where they are visited by that child, after death... in a way that CONVINCES them it was real, true and not a dream or hallucination. These people almost NEVER believe they are psychic or have any gifts... it's just a combination of being OPEN to the
experience, and truly craving that connection, and the "universe" allowing and encouraging that connection to happen for the healing and health of all. (Or at least that's what I believe... and teach, I know others feel differently, but all I can speak to is my OWN experiences with spirit, and the hundreds of connections we've been able to facilitate as
well). What about out of body experiences, remote viewing, past life memories and that sort of thing? Does that make you psychic, or gifted as well? I honestly believe that EVERYONE can have these sorts of experiences with a little bit of effort. the key is, to be OPEN to the idea, and to believe it's possible. It's amazing how much more our psychic
abilities open up, accelerate and accentuate through positive reinforcement... and every spiritual or psychic adventure you have, makes that muscle a little bit stronger! (Meaning that the more you flex it... the more amazing experiences with spirit, and your OWN psychic powers you'll have). Tourism in Western Europe A Collection of Case Histories
Richard Voase provides an interesting collection of case studies regarding Western European tourism development. The case studies are well organized in three thematic areas based on political, economic and socio-cultural contexts. The collection of stories communicates changes in tourism development and practices and reflects how tourism
development seeks for new ways of tourism thinking. Voase concludes that tourism experiences, on the part of travelers, show signs of active decision making with passive consumption. This point prompts the reader to think that tourism experiences that are creatively constructed, however accessed through extensive information
search and decision-making. The case studies are authored by a variety of authors with strong local ties to the place they write about which enables extraordinary insight into issues the tourism development course to
help students identify current issues in tourism (e.g., environmental challenges, sustainability, conservation approaches) and build upon definitions and theoretical models in tourism. In his introduction, Voase conveys that the analysis or interpretation of the cases is based on political, economic, socio-cultural and technological environments. The
analysis captures the multidimensionality of the tourism product and the cultural and social factors that relate to current ideologies are relating to prevalent postmodernism approaches that seem to affect those consumer behaviors, which capture experiential consumption rather than production
processes of products or services. The book consists of eleven chapters are approached under the lenses of a political context analysis. The first chapter, by Meethan, presents the role of tourism marketing and public policy in the counties of Devon and Cornwall, England. Meethan concludes that for these two counties
 "marketing was one aspect of a wider integrated policy which aims to incorporate tourism more fully into the regional economy" and these programs would not have been possible without the funding from the European Union (EU). "The cases of Devon and Cornwall also demonstrate how new organizational forms emerge as a response to wider
structural changes". Chapter 2, by Morpeth, focuses on the role of leisure and tourism as political instruments in Britain during the 1980s. Central and local governments used leisure and tructural problems evident in England in the 1980s.
Morpeth discusses the case of the city of Middlesbrough and the role of Thatcherism policies on the city, which focused on the generation. Chapter 3, by Voase, discusses the influence of political, economic and social change in a mature tourist destination; the Isle of Thanet in southeast
England. Voase concludes that the process of policy, planning and development of tourism in a mature destination is not always straightforward. The antagonistic politics among the stakeholders involved in tourism development of the destination. Chapter 4, by Robledo and Batle, focuses on Mallorca
as a case study for replanting tourism development for a mature destination using Butler's (1980) product life cycle concept. As a mature destination, Mallorca needs a sustainable development for a mature destination using Butler's (1980) product life cycle concept. As a mature destination, Mallorca needs a sustainable development for a mature destination using Butler's (1980) product life cycle concept. As a mature destination, Mallorca needs a sustainable development for a mature destination using Butler's (1980) product life cycle concept. As a mature destination with a mature destination using Butler's (1980) product life cycle concept. As a mature destination using Butler's (1980) product life cycle concept. regulation to protect the environment. This plan however, as Robledo and Bade identified, is an interesting case of struggle between different groups (i.e., government, ecological groups, councils, hoteliers, construction industry) defending their interests in tourism development. Voase identifies these first four chapters having three common factors
the role and interplay of local tiers of government in the formulation and implementation of policy, the role of socio-cultural factors. While these common factors are not directly evident in the presented case studies, Voase fills that gap with his
writings. These common factors can stimulate further discussion as to what is the role of politics in tourism and how policy can affect researchers and practitioners in the field. The second part of the book focuses on two agri-
environmental schemes, Tir Cymen and Tir Gofal, and how they affected recreation opportunities in Wale's agricultural landscape and changed relationships between "rural and
create an image of Loviisa as a historic tourist destination and to create new products in alignment with the historic theme. Lindroth and Soisalon-Soinimen identified that without the support of the tourist office, as well as the National Board of Antiquities, development would not have progressed significantly. Also, the European Union funding
helped with training and expert help. The professionals and project leaders involved in the process shaped the project through their enthusiastic actions described in detail in the case study. Chapter 7, by Bohn and Elbe, describes the story of one man and how his vision for the municipality of Alvdalen, Sweden transformed the town into tourist
destination. The most important element in this story is that this man created a destination without knowing its full value as a marketing tool. This chapter underlines also the importance of cooperation
among stakeholders involved in tourism. Voase identifies factors that these three cases share: the role of the individual entrepreneur in developing the product, the consumption of natural resources, and tourism in four case studies. Chapter 8, by
Finn, discusses the change of European football from being a fan's sport to being a spectator's sport to being a fan's sport to being a spectator's sport to be in a spectator's sport to be i
observe trade offs between natural resources and the provision of tourism experiences. This case study also shows how a destination responded to stakeholders' opinions about coastal conservation, public access and allowable visitation levels. Chapter 10, by Lohmann and Mundt, focuses on maturing markets for cultural tourism in Germany. The
chapter discusses how tourism shapes culture through the exchange of experiences between travelers and tourism are discussed as constituents of cultures, which can affect their own
Chapter 11, by East and Luger, focuses on youth culture and tourism development in the Austrian mountains. East and Luger share interesting insights on youths' reactions and behavioral adjustments toward tourists. Youth in rural
mountain areas were found to be interested in urban experiences. Voase concludes these four final cases have three underlying themes. The first theme is that the consumption experience is staged or produced. This theme brings to mind MacCannell's (1976) notion of front and back stage realities. Front stage is the presentation of a destination to mind MacCannell's (1976) notion of front and back stage realities.
visitors, whereas back stage is the real or truer nature of a destination. The second theme is environments have changed and caused spectators to also change. Overall, this
book is useful to practitioners and academics because it provides case studies offered by people with close connections to the tourism marketing and an academic, effectively brings together case studies which focus on Western European tourism and
communicates concepts which shift 'old' tourism principles to 'new'. His introduction of each collection of cases (i.e., economic, political and socio-cultural) are insightful. Voase, however, does not discuss the introduction of Euro currency in January 2002. This is an important change to the economic structure of all countries-members of the EU and
their socio-cultural development. The interconnection of the EU countries through the common currency might create a feeling of a larger community, which potentially affects tourism through the common currency might create a feeling of a larger community, which potentially affects tourism through the common currency might create a feeling of a larger community, which potentially affects tourism through the common currency might create a feeling of a larger community, which potentially affects tourism through the common currency might create a feeling of a larger community, which potentially affects tourism through the common currency might create a feeling of a larger community, which potentially affects tourism through the common currency might create a feeling of a larger community.
environmental and consumer trends that will influence tourism in Western Europe during the 21st century. He concludes an aging population, global warming, and active and passive consumer segments are elements of a 'new' tourism. All three trends will potentially affect future research in the field of tourism development and marketing. Both
academics and practitioners should be aware of these trends. Voase as a practitioner and academic makes a meaningful contribution through these themed case studies and the identification of major themes and trends of tourism in Western Europe.
