	CEO Great Cy	2012 - Now
	Founder AWS log	2008 - 2012

- (c) Calculate the concentration of urea, in mol/L, in the saturated solution at 20 °C.

(d) The student also determines that the concentration of urea in a saturated solution at 25°C is 19.8 M. Based on this information, is the dissolution of urea endothermic or exothermic? Justify your answer in terms of Le Chatelier's principle.

- (e) The equipment shown above is provided so that the student can determine the value of the molar heat of solution for urea. Knowing that the specific heat of the solution is  $4.18 \text{ J/g}^\circ\text{C}$ , list the specific measurements that are required to be made during the experiment.

	$S^\circ$ (J/(mol·K))
$\text{H}_2\text{NCONH}_2(s)$	104.6
$\text{H}_2\text{NCONH}_2(aq)$	?

- (f) The entropy change for the dissolution of urea,  $\Delta S_{\text{soln}}^\circ$ , is 70.1 J/(mol·K) at 25°C. Using the information in the table above, calculate the absolute molar entropy,  $S^\circ$ , of aqueous urea.

- (g) Using particle-level reasoning, explain why  $\Delta S_{\text{soln}}^\circ$  is positive for the dissolution of urea in water.

- (b) The student claims that  $\Delta S^\circ$  for the process contributes to the thermodynamic favorability of the dissolution of urea at 25°C. Use the thermodynamic information above to support the student's claim.
