It is very scary to enter a room on ACT test day and no idea what the rehearsal question you are about to respond is about. Fortunately, you do not need to know - the act test prompts just ask about a small category of petty ideas. And the best part is that you already know everything about the topics! Continue reading to see the writing prompts of the sample you can practice. More importantly, we also teach you how to gather evidence before the test so you can walk in 100% prepared to respond to any prompt they give you. 8 Example of Act Essay requests the idea behind the act of act is that it is a fair test of everyone's writing ability, because no one knows the topic or question before the test. For this to be true, the act actually has to choose between a small small slice of questions (since the topics should be broad enough so that all test takers can write about them). See for yourself: Here are the eight free and available official writing prompts publicly. Do you realize any common topics? 1. Smart Machines (Source: Act.org) Many of the goods and services depend daily are provided by intelligent and automated machines instead of human beings. Roba's build cars and other goods in assembly lines, where there were human workers. Many of our telephone conversations are now realized not with people, but with sophisticated technologies. Now we can buy goods in a variety of shops without the help of a human box. The automation is usually seen as a sign of progress, but what is lost when we substitute human by machines? Given the acceleration of the variety and prevalence of intelligent machines, it is worth examining the implications and meaning of its presence in our lives. Participating a: what we lose with the replacement of people by machines is part of our own humanity. Until our worldly daily meetings do not need more from the US B́sica, respect and tolerance for other people. Perspective Two: Machines are good in low skill, repetitive and extremely accurate job jobs. In both cases, they work better than humans. This efficiency leads to a more practical and progressive world for everyone. Three perspective: Smart Machines Challenge our longtime ideas about what human beings are or can be. This is good because it pushes humans and machines for new and unimagined possibilities. Write a unified and coherent essay on the growing presence of intelligent machines. 2. Public health and individual freedom (source: Act.org) Most people want to be healthy, and most people want both freedom and as possible to do the things they want. Unfortunately, these two desires sometimes conflict. For example, smoking is prohibited from most public places, which restricts the freedom of some individuals because of the health of others. Likewise, car emissions are regulated in many areas in order to reduce pollution and their risks to health for others, which, in turn, restricts the freedom of some people To boost the vehicles they want. In a society that values health and freedom, how can we balance the two? How should we think of conflicts between public health and individual freedom? Perspective One: Our society should strive to achieve the best good for the greatest number of people. When the freedom of the individual interferes in this principle, freedom must be restricted. Previous Paras: Nothing in society is more valuable than freedom. Perhaps the physical health is sometimes improved, restricting freedom, but the cost to the health of our free society is very great to justify it.Perspective three: the right to avoid risks for © When we allow individual behavior in danger the others, we damage freedom and health. Imagine a unified and coherent essay on the conflict between public health and freedom. 3. Kid stuff (source: Act.org) Toys are for children, right? No more. In the last years, things that used to be considered "Kid stuff" grew grown Among adults. Nowadays, adults regularly play video games, watch animated movies and television program, shopping dolls and other collectible figures á ¢ ¢ and read comics for their own fun. Is the adult pleasure of child entertainment merely a sign of immaturity? In what ways playing with children's things change the way adults understand today's youth? Given that toys, games and publication that used to be exclusively for children are growing in popularity among adults, it is worth considering the effects and implications of this tendency. Operated: It is good for adults to be familiar with Kid's things. They will understand the lives of children better and be more responsive to their needs, interests and problems. Two: Adults need to be models of maturity and responsibility. When they act and think like children, the children do not have anyone to look at orientation.Perspective three: Children need their own cultural space - their own books, their own toys, their own films - to explore their ideas. When adults begin to take over the space, the children lose. Imagine a unified and coherent essay on the adult tendency playing with children's things. 4. Extracurricular activities and codes of conduct (source: Act.org) For many students, extracurricular activities are a significant part of the experience of teaching. These activities allow students to develop their skills in areas such as sports, music and drama while building relationships with colleagues and gaining experimenting or competing. But in many schools, students participating in extracurricular activities are subject to special codes of conduct. These codes generally establish high standards for performance and academic behavior, and students must meet the patterns to remain eligible for their activities. Students participating in extracurricular activities are subject to special codes of conduct? ONE PERSPECTIVE: All school rules and patterns should also apply to all students. It is unfair to insure students who practice sports or music for higher patterns than students do not. Perspective Two: Participation in school activities is a privileged, not a right. It is fair to ask students to gain this privilege studying a lot and behaving. Three perspective: School programs must be open to all students. Not all students can meet high standards, which means that not all students can participate in extracurricular activities. Write a unified and coherent essay on whether students participating in extracurricular activities should be subject to special codes of conduct. Here are four other prompts that build, based on the central question and the neatest prospects that I extract from the official prompts (if you are curious about how I build these prompts, check out our article on how to attack the ACT writing prompts ): 5. Globalization Many of the goods and services depend daily on global sources. Where once you can talk to a customer service representative from all over the Paás about your computer's problems, your connection would now probably be forwarded all over the world. In a grocery store, it may be possible to find a mixture of food from several continents. Several culture pieces can be transmitted instantaneously around the world over the internet, allowing shared experiences between people of geographic duplicate origins. Globalization is usually seen as a sign of progress, but what happens when we submit local interactions with global? Given the rate of acceleration of globalization, it is worth examining the implications and meaning of its presence in our lives. The globalization requires a in the way we think of other people, other societies and the world. This is good, because it will push mankind to previously unimaginable possibilities and achievements. Trospective Two: Removing geographic boundaries from the comment means that the right people can be chosen for the right jobs to the right price, right. Efficiency leads to a more practical and progressive world for everyone. Perspective Three: The flowering of a new global society comes to the cost of local cultures. Less diversity leads to fictis in empathy and creativity, two of the most defined characteristics of humanity.Write a unified and coherent essay on the growing presence of globalization. 6. Information accessibility At this time, there are more information available for more people than ever before. Smartphones can instantly provide instructions to your destination when until 10 years ago you had to look for directions before you leave and / or bring a map. Researchers from all over the world are capable of gathering their knowledge to advance their fields faster. Many libraries have expanded their collections to include signatures for online / electronic databases as well as printed works. Greater access to information is usually seen as a positive advance, but what are the consequences of making such knowledge available for so many people? Based on the increasing amount of information in the world and in the most ample access to it, it is worth examining the implications and meaning of easy access to information in our lives.Perspective one: with greater ease of access to information, we lose the incentive to gain knowledge. When outsourcing our memories of facts and other information, we are becoming less intelligent.Persets two: Greater access to information allows us to avoid memorizing facts and instead use our sector for a thought of higher level. This efficiency leads to a more practical and progressive world for everyone. Perspective Three: The more people who have access to more information, the greater the chances of collaborative and therefore advances even more in human knowledge. This is good because it leads us to new and unimagined possibilities. Imagine a unified and coherent essay on the increasing accessibility of information. 7. Novelty in the world today, the novelty is highly valued. Social media applications are constantly updating to make sure that you are shown the most recent information or posts of those you follow. Many of the products we bought today are intentionally created with a few steps of life to encourage consumers to continue to get the latest and most updated versions. Signature services for music and Veheo make it possible to listen continuously and watch new machines. Novelty is usually seen as a positive feature, but what are we losing constantly concentrating on the new? Given its growing prevalence, it is worth examining the implications and significance of the growingness in the novelty in our lives. Umspective One: The change is the only constant of life, and ignoring this is to grow struggling and stagnate. More exposition to new ideas and ways of thinking can only lead to progress to society and humanity as a whole. Two experts: exclusively focusing on the new, we lose the vision of what we know. Instead of ignoring the old, we should concentrate more on previous realizations and errors. The only way to move on is to meet the lessons of the past.Perspective three: information, products and ways of thinking should be valued if they are useful and trustworthy, not just because they are New and exciting. NEW is not automatically equal to improved. Write a unified and coherent essay on the increasing value assigned to novelty. 8. Work changes less and less people are getting the same work as a lifetime. In the United States, the mother person will change more than 10 times throughout your life. Some workers will do lateral, or even down, movements to increase personal fulfillment. Others change jobs in an effort to get the highest possible salary. Enhancement of personal autonomy is usually seen as a sign of progress, but what When is the duration of the experience it is replaced by a variety of experiment? As the number of jobs people will hold the Of their lives continues to scale, it is important to examine the implications and meaning of this tendency for our lives. Sameda: Because jobs are no longer a vital commitment, people will feel more free A greater variety of positions. This increase in the amplitude of experience, in turn, will make employment candidates more attractive for future employers. Perspective Two: As the frequency with which people change employment increases, people's loyalty to their employers will decrease. This, in turn, will take to cultures of a more fractured company, because the employees will only care what is best for them.Perspective three: the disappearance of the stigma associated with the switching of Frequent work will allow employment-decision margin officers. The increase in autonomy will lead to increased happiness and satisfaction at work. Write a unified and coherent essay on the growing frequency with which people alternate jobs. For additional writing prompts to practice, you may also want to consider buying the latest official ACT preparation guide, which includes five additional official test prompts. While you will see many different topics asked about Act Ensay section, there is only one act of writing an act (and three types of perspectives) that you need to know. We call these nuclea prospects and central perspectives. This issue (and these perspectives) will be carried out through each Act's essay request that you will receive. The raciocenium behind the central question as you can see, all the writing pieces of act are about how the world (and people in it) are (are) changing. Everyone summarizes the following question: "What are your opinions on how human beings are changing the world?" Or, even more widely, "What do you think the way the world is changing?" The ACT frames is press in this way because Act, Inc. wants to choose test topics that all students can have an opinion on, instead of asking about something extremely specific for which some students are more prepared What others. First global image of VIIRS by NASA GODDARD SPACE SPACE CENTER, used under CC by 2.0 / Seamless of the original. Read through the official prompts again (above). Instead of asking about the life of teaching (as the former writing actual act), the current act calls for students to consider how changes in the world today affect all humanity, Force students to put the problem in a broader context. While the topics may seem highly specific at first sight (for example, "Smart Makers"), the explanatory paraghaphs for each prompt make it clear that the topics can be released in various different directions (and to be accessible to most people). There will be no prompts about problems that mainly affect urban residents (for example, meters), or affect only certain geographic areas (eg, snow preparation). Likewise, something like "smartphones", for example, would never be a topic for its own account. Instead, it would be an example that could be used for the topic (as with the "Smart Makers" prompt). When writing the act test, this really helps to have strong opinions on the central question ("What do you think the way humans are changing the world?"). But if you do not, There is no problem: it is easy to develop opinions! And we're here to give you an inkeeper. In the next section, we will give you three basic views related to the issue of the main act test. Let's show how to apply these perspectives to specific prompts and tell you where you can find examples to support them. The raciocenium behind the main perspectives The new ACT prompt has three different perspectives that you need to discuss during the course of your essay. For Three essential perspectives, I read and reemmit the prospects for all three official prompts, considering them to the light of the informative paragraphs that preceded them. I ended up with these three basic opinions: main perspective a: the changes caused by [instead] is not good and they have to have results. This perspective maps in perspective 1 of the first sample prompt of official act, perspective 2 of the second and fourth official sample prompts and perspective 1 of the third official sample prompt. My nickname for this position is "conservatism", since this perspective wishes to be conservative and do not change things. Perspective Core B: Changes caused by [Topical Prompt] will lead to greater efficiency (IN). This perspective maps in perspective 2 of the first and third sample of official act act above, perspective 1 of the second official sample prompt and perspective 3 of the fourth official sample prompt. My nickname for this position is "utilitarianism", already that this perspective is all about what will be more practical and will take to the best good for the greatest number of people (this is even explicitly written in perspective 1 of the second official sample prompt). Perspective Core C: Changes caused by [topical prompt] will produce positive future results because it will lead to improvements for all humanity. This perspective maps in perspective 3 of the first and second sample of official act, perspective 1 of the third official sample prompt and perspective 2 of the fourth official sample prompt. My nickname for this position is "progressivism", since this perspective argues that change = progress = good. Building a support bank now you know that the act's essay will only ask you to discuss a question: "How are you changing the world?" If you prepare for this issue with several evidence before the test, you will be ready to respond to the prompt, no matter what it is. To give you more time to write and organize your argument, your thesis should match one of the three prospects given (or at least take elements of one) - In this way, you do not have to enjoy the time to come with a fourth Completely new perspective and compare it to at least one other perspective. But get better! The Internet (and society in general) is full of theories and arguments about how the world is changing, and if this is a good thing. Everything you need to do is read in some of them and develop your own opinions. Opinions about the world Your act test thesis should basically be one of the three perspectives, but you have to support this opinion with evidence - the answer to the question "Why?" (or "Why not?"). See these sets of three opinions and try to think of reasons or examples to support each one. The world is changing to be worse than before. (Because ...) The world is changing to be better than before. (Because ...) The world is changing to be more efficient than ever. (Because ...) Brainstorming research and ideas to the contrary of the SAT rehearsal, you can use abstract raciocenium to develop your point in the act. This means that you do not necessarily have to reach the test-loaded with specific examples: if you can not think of a concrete example that will withstand your point, you can do one that you go together while you are ¡Building your argument. Below are some sample internet features that can serve as support (or brainstorming assistance) for the above opinions. You can use the general ideas of these features, but you can also find some useful specific examples for when you face your real actual actual prompt. New York Times, Washington Post, Washington Post, Washington Post, La Times, Al Jazeera, Time, Atlamen, Slate, The Economist, Wired, New York Magazine, Popular Science, Psychology Today, Vox, Microphone, and Even Buzzfeed News will have information about current events you can use. If you prefer to listen / watch the news, you can always try as a source of current event information, well watching or listening to television, radio or podcasts. How do I use this article? Just knowing what the actual writing instructions can probably You think about how you interactate with the world a bit different. Keep your eyes eyes and your ears open to anything that can be forage to answer a question about how the world is changing - anything you learn in history / social studies, read / hear about in the news, or to Even finding in a futuristic novel can be added to your support bank. But, of course, the most effective way to use information in this article is to practice trials of planning and writing act. We have another article with act test tips, which can give you more information on how to practice the real essay process, but knowing about the types of prompt can you think of your own opinions about how the world it's changing. After all, you're being asked about it because you have a lot of experience with her, living in the world as you do. Therefore, using the prompts at the beginning of this article, or another group of issues on issues that have to do with change (some items on this list of topics of debate, for example), start planning the Rider Responses Hypothytic writing. Try to read our ste-by-step act test example if you are puzzled where to start. For each edition, planning involves the choice on one side, supporting it with one to two reasons or examples, and decide how to discuss at least another perspective in relation to what you have chosen (including arguments both for the other perspective). If you really want to maximize your rehearsal score, you should practice planning trials on how the world is changing until you can do it in 8-10 minutes in a reliably. If you are curious about where the estimate of 8 to 10 minutes comes, check out our rehearsal tips article. What is the next? Check out our comprehensive collection of ACT writing guides, including a detailed analysis of writing heading that includes explanations and strategies and our explanation of the differences between the old The new ACT writing test.
