How to download resource pack in minecraft

From Minecraft Wiki This article is about how to install a resource pack. For what a resource pack is, see Resource Pack. These tutorials are meant to help you use resource packs in Minecraft. Resource packs allow players to customize textures, music, sounds, language files, end credits, splashes, and fonts but do not change the actual gameplay. Any platform Download a resource pack, you should get a .zip file Open the folder to which you downloaded the file Copy the .zip file Open Minecraft In Minecraft, click on "Options", then "Resource Packs" Choose "Open resource pack folder" Paste the file into the resource folder in Minecraft Go back to Minecraft, the resource pack should now be listed (if not listed then go to the main menu by pressing Esc and repeat step 5) and you can activate it by choosing it and hitting "Done". The game will now reload itself. Direct methods Windows (Java Edition) Download the resource pack you want Copy the file you downloaded Press # Win + R. A window titled "Run" should appear in the textbox inside the "Run" window, type "%appdata%" and click "Ok" In the folder that just appeared, open the ".minecraft" folder In the ".minecraft" folder, open the "resourcepacks" folder Paste the resource pack in this folder Open Minecraft, select "Options", then "Resource Packs", select your resource pack and select "done" You can skip 4,5, and 6 if you want to, you have to type this in the "Run" window: %appdata%/minecraft/resourcepacks MacOS Download a resource pack of your choice Do NOT unzip the resource pack just move the .zip file to minecraft's resource pack folder (Should be at ~/Library/Application Support/minecraft/resourcepacks) Open up Minecraft and login to your account At the main menu select "Options", then "Resource Packs" Now select your new resource pack and then select done To access ~/Library/ on a Mac running MacOS 10.7 and above, switch to Finder, open the 'Go' Menu, and while holding down ⌘ Option, select 'Library' Linux Download a resource pack, you should get a .zip file Open the folder to which you downloaded the file Copy the .zip file Type ~/minecraft/resourcepacks/ in your file manager's address bar or in the console (If it is not showing up, press the three dots in the corner and make sure that the "show hidden files" box has a check next to it, then repeat step 4.) Paste the file into the directory Open Minecraft Go to "Options", then "Resource Packs" The resource pack should now be listed and you can activate it by choosing it and hitting "Done". Last updated: 2021-01-29 Resource Packs/Texture Packs can change the look of everything in Minecraft, including the items, creatures (there's a steampunk Resource Pack that turns all enemies into gear powered robots!), and even the hotbar and inventory itself. You can change Resource Packs whenever you want, and there are lots of really cool ones to explore with some truly unique looks and art styles - see the bottom of this article for some examples of different Resource Packs! In order to use a Resource Pack on a Minecraft server, it must first be hosted on a website, so that each player who joins the Minecraft server can be prompted to download the Resource Pack. The Minecraft server itself is not capable of hosting the files, and an external location must be used. Coming from Minepack.net? We unfortunately had to sunset that solution to focus on other aspects of our service, but following this article should allow you to host your own Minecraft Resource Pack for free. One of the simplest and cheapest methods of doing this is to simply upload the Resource Pack to any kind of file sharing site that provides public and direct file downloads. Many of these file sharing sites are free, and require only simple downloads or a free account to get started. As long as the site will give you a URL that points to the file, it can be used for hosting your Minecraft Resource Pack. Some examples of file sharing sites include: Dropbox Google Drive OneDrive iCloud Websites with paywalls or redirection pages that prevent direct downloads (such as Mediafire) should be avoided, as they will generally not work for the purpose of hosting a Resource Pack. Size Limit Before getting started, it's important to note that there is a maximum file size for Resource Packs that can be downloaded automatically by Minecraft, on versions before 1.15 it is 50 megabytes. When 1.15 launched, they changed the resource pack version to 5, which did a few things, including increasing the client-side downloading from 50 megabytes to 100 megabytes! Any Resource Packs larger then 50 MB pre-1.15 will not be automatically downloaded - the same can be said if they are larger than 100 MB on versions 1.15+. This limitation is built into the game, and cannot (to our knowledge) be circumvented. It is possible to manually install Resource Packs that exceed the limit, but will require each of your players to manually install the Resource Pack, which isn't ideal. Uploading the Resource Pack For the purpose of this guide, we're going to be using Dropbox as our file sharing platform of choice. Dropbox is easy to set up, simple, and widely used. We will also be showing examples of using Dropbox on Windows operating system, so all instructions (ie, rightclick to bring up context menus) are for Windows. Installing Dropbox You can install Dropbox by visiting their site at . Download the installer, then find it on your computer and run it. When it finishes installing, you will be greeted with a box to sign up for an account, or sign into an account if you already have one. Either click the blue text "Signup" (near the top) if you are a new user, or sign in if you have an account already. Once Dropbox is installed on your computer, and you open the program, you will see something like this: Moving Files to Dropbox Once you've got Dropbox set up, navigate to where you have the Resource Pack saved on your computer. As an example, we will be using the "Faithful-32" Resource Pack, which is essentially the regular Minecraft textures but just in much more detail. It's available on Curseforge here: Faithful-32. The version of this Resource Pack for Minecraft 1.15.2 will download as a file named something like 1.15.2-r1.zip. Right-click on the file name, and in the pop-up menu, look for the option "Move to Dropbox". Click on that, and the file will disappear from that location. If you're curious, it will have been moved to a newly created "Dropbox" folder in your user account (at least on Windows). Open up the Dropbox app, and you should see that same file name now showing as a file in your dropbox window. To create a share link, use the following steps from the Dropbox UI: Click on the three dots to the right of the file name when you move your mouse over it, or just right click on the file name. This will open a small menu. Click on the "Share..." option from the menu. Click on the "create link" button in the lower right. This will create a public URL for the file. Once the "Create Link" button changes to a "Copy Link" button, a URL has been successfully created for the Resource Pack. You can click on the "Copy Link" button to reveal the URL at the bottom of the share window, or you can close the share window and return to the regular Dropbox window and do it there. Back on the regular Dropbox window, you can copy the URL link by either clicking on the symbol that looks like two chain links (or just simply right click on the filename). You can quickly test the URL is working by opening up a browser window, and pasting the URL into the browser. If everything is set up okay, you should see something like the screenshot below. It will display the name of the file, the contents of the file, and an option to download the file. This means the file is hosted, and it can now accessed by other programs over the internet. Configuring your Minecraft Server with Your Resource Pack To configure your server to prompt your players to install your chosen Resource Pack when they connect, you will need to edit the server.properties file. Optional: Make a SHA-1 Hash This an entirely optional step, but it's a way for the game to make sure that the Resource Pack isn't garbled during the download process. A "hash" is a long string of characters created from source information, according to a formula. If you run the same formula on a copy of the original file, you should get the same exact result each and every time, over and over. Since the results of the hash are predictable and repeatable, Minecraft can use it to make sure the Resource Pack that's downloaded is intact. If it's a different result, and doesn't match, it means the file is changed somehow. That usually means something bad happened during download (incomplete download, corrupted information, etc). You can search online for SHA-1 hash generators, and there are many options to choose from. Some can use the URL you generated above, and for others, you will need to upload the original file (the Resource Pack) from your home computer to make the hash. Look carefully at the options for choosing the source information, and you want to look for either a field for inputting a URL (which makes it go grab the file from where you hosted it), or to choose a file to manually upload from your home computer. If there's only a text input box, and you paste in the URL, or file name, the SHA-1 generated will literally only be for the text that makes up the URL, or file name. It won't actually be for the file itself. When Minecraft compares that SHA-1 hash against the file, they won't match at all. Editing the server.properties File Before editing your server.properties file, you will need to prepare the URL you now have for direct download. The critically important step here, is to edit the 0 at the end of the URL and replace it with a 1, so that it says ?dl=1. If the zero 0 is not changed to a one 1, it won't actually download the file automatically when Minecraft accesses the URL. For example, if your Resource Pack URL is RandomID>/ResoucePack.zip?dl=0, you would use RandomID>/ResourcePack.zip?dl=1 in your server.properties file. If using the NodePanel, our custom solution for hosting game servers, you can set the Resource Pack configuration options via the "Game Settings" page and "Gamemode" tab: If you're hosting elsewhere, or prefer to edit the files manually, look for the following lines in your server.properties file: resource-pack=resource-pack-sha1= Paste the Resource Pack URL from Dropbox into the resource-pack line, after the equals sign. As mentioned above, ensure the URL has been tweaked to allow direct download with dl=1. resource-pack= RandomID>/ResourcePack.zip?dl=1 If you've generated a SHA-1 hash, you can include that here as the resource-pack-sha1 value. For example, if your generated SHA-1 hash for the previous Resource Pack was cf23df2207499a74fb169e3eba035e633b65d94, you would use the following in your server.properties: resource-pack= RandomID>/ResourcePack.zip?dl=1 resource-pack-sha1=cf23df2207499a74fb169e3eba035e633b65d94 Be sure to save the changes made to the config file, and then restart your server for the changes to go into effect. Players Joining Your Server When players join the server, they will now see a message prompting them to download the Resource Pack, if they wish. If they answer yes, they will see a red progress bar as it downloads, and then a branded Mojang screen will appear for few moments. After it disappears, all the textures will be changed to the ones from the Resource Pack. Before and After Screenshots Below are some screenshots of a little house we made in Minecraft, with the vanilla textures and the Faithful-32 Resource Pack. There are screenshots of the outside, the inside with crafting stations, and crops growing near the house. These screenshots are of the same exact Minecraft world, with nothing being changed on the server at all. If a player refuses to download the Resource Pack, or the Resource Pack is removed, they will see the vanilla textures again. The Faithful-32 Resource Pack textures are heavily based on the original textures from Minecraft, but at an increased resolution and tweaks to add more detail. It's very faithful to the original game textures, as the name suggests, but below are some examples of other Resource Packs where you can see much more dramatic changes. Other Resource Pack Examples MYTHIC - A Pixel Art Journey by FishyMintTextures Clarity - Pixel Perfection by SCester Annahstas Beastrinia Pokemon inspired by Filmjolk NEW By NickRider | Themed Resource Packs Minecraft on its own is a great game. The community was given the freedom and necessary tools to make the game even better. With so many creative minds, dedicated to the game, we got to see some amazing resource packs. The Animal Crossing resource pack is one such example. Despite... By Leostereo. ThePavoReality, 500poundsnofothing | Simplistic Resource Packs, Clean Reseource Packs The Tiny Pixels resource pack was developed with the ambitious goal of making Minecraft better but by downscaling the resolution from the default 16x to 8x. While it may not appeal to many players, there are still some that will appreciate a simpler experience. Higher-resolution resource packs do not always... By Loolylinte | PvP Resource Packs Aluzion PvP resource pack was crafted with PvP players in mind. Even if vanilla Minecraft is a great game for multiplayer PvE, the PvP part cannot be disregarded. The number of players that enjoy PvP should not be underestimated. Aluzion PvP texture pack takes the vanilla Minecraft experience and tweaks... By SIMonk0 | Themed Resource Packs The SimonKraft resource pack managed to change vanilla Minecraft for the better with its astonishing visuals, making the whole game feel more alive. When players are looking for texture packs to try, they are usually looking for a visual upgrade. Some resource packs do it better than others. SimonKraft is... By VeryMacCrafter | Cartoon Resource Packs Minecraft is not exactly a realist looking game. The graphics actually look rather cartoony and flat by design. That's why using add-ons such as Mad Pixels resource pack might seem like a not bad idea. Because the objective of resource packs is to give Minecraft a completely different look. Even... By Wayuki, original tekpir8 | Medieval Resource Packs, Rustic Resource Packs, RPG Resource Packs The Wayukian resource pack was released many years ago and it is one of the few resource packs that kept getting updates constantly. The updates come from a different user than the creator that took over the project and continues working on it under the name of New Wayukian. It... By theVoid1313, kyctarniq | Medieval Resource Packs, RPG Resource Packs It is difficult not to like a good medieval-themed resource pack. TheVoid's AD Reforged resource pack gives vanilla Minecraft a visual twist that makes it a bit darker and better looking. The texture pack is a spiritual successor to the Arestian's Dawn resource pack which was abandoned by its developers... By eleazaar | Cartoon Resource Packs Lithos resource pack is a collection of textures which is adding a lot of new things and creatures into the big world of Minecraft. Very nice resource pack with resolution of 32x32, very well detailed and also adds a couple of new types of creepers. Really wonderful minecraft resource... By theCyanidex | Default Resource Packs The Unity resource pack aims to preserve what makes Minecraft what it is. This is important, because many resource packs try to convert vanilla Minecraft into something it is not and that is a high fidelity, high texture resolution game. This is not what made Minecraft so popular. As the... By XSheep, Nova Wostra | Themed Resource Packs Have you heard about the Pixel Perfection resource pack? Are you now wondering that if it's a really unique and one-of-a-kind Minecraft resource pack? Well, this resource pack does not necessarily feature any underlying and specific theme. Typically, all resource packs are classified into some common groupings, such as RPG... By Aryan Nikose | Realistic Resource Packs There are very few projects that get you excited. The URBAN resource pack appears to be one of the few that manages to stir the interest of even the most veteran Minecraft players. This is because it is not just a texture resolution upscale. It is also not just a... By d3fn3d | Default Resource Packs, Simplistic Resource Packs Not all resource packs set a target for themselves to make Minecraft into something it is not. The Defscape resource pack does not try to bring in photorealistic graphics. What it tries to do is to add more details to existing textures. Defscape was released 11 years ago. It has... By disco , PxlHero, AntonLandoaALVQ | Simplistic Resource Packs, Clean Resource Packs Featuring soft color tones and coming with a calming effect, OCD or obsessive compulsive disorder is a texture pack designed for the Java edition of Minecraft. The pack is created by disco _ and looks clean, minimalist and simple. While the focus for the resource pack sticks to the concept of... By Stridrey | Themed Resource Packs, Other Resource Packs When it comes to resource packs in Minecraft, MS-Painted is one of the best there is to offer. Although we've been playing Minecraft for years and have tried out a number of resource packs, the MS Painted resource pack really caught our attention. The design of the MS Painted resource...
