Instruments is a community for people who like to do things. Come and explore, share, and make your next project with us! Instruments is a community for people who like to do things. Come and explore, share and make your next project with us! Most apps that install from the Google Play store works ideally on almost all devices. However, it can be very frustrating when one of your favorite apps continues to crash into your Android. Many people assume that the apps are crashed because there is a bug in the software or because it is incompatible with the device. FiTches / Getty Images The reality is that there is a wide range of reasons why an app could continue crashing on Android devices. So it works through the suggestions for resolving the following problems before surrendering. Before starting troubleshooting, check the Google Play page for the App for the supported version of Android. This is usually listed below "Requires Android" and display the minimum version of the required Android operating system to run the app. There are many reasons why apps can continue crashing on your Android, but there are some more common causes for this problem. The app does not support your version of Android. Your installed version of the app is not updated. The app requires a better network connection than the one you are connected. Your device is out of storage space and the app does not access enough system memory to run. There are some different things you can try to solve each of these problems. Instructions apply to all versions after Android 4.1. Starting from 2020, most phones perform Android 10 or higher. Try the following corrections in order. They are provided by the most common common cause. This should help you solve this problem more quickly. Restart your Android. This surprisingly simple solution solves most problems, including the crashing apps. This is often because in the time of the app's browser and cache can fill the memory of your Android. When the phone is active for a long period of time, the use of the memory of these can be extended. Restarting the device cancels all caches and free the memory. Check your internet connection. There are some apps that require more internet bandwidth and will not work well on a cellular Internet connection. Make sure Wi-Fi on your Android and test the app when you have a strong Internet connection through the home network. Even if your connected to a network, your Internet connection may still not work properly. Try it by opening a browser and typing a random web page to make sure it loads correctly. Update the app on your Android. You can choose to update the app that is manually causing the problem or configure Google Play to automatically update all apps on the phone. While you are in this, make sure your Android operating system has everything The latest system updates as well. Google Play Services update. This background app is a basic functionality of the Android operating system that ensures applications work properly. When this service in the background does not work or is obsolete, it can cause the application crash. Force stop the application. Sometimes, even when you think you have closed an app on your Android device, the application is not properly close and can keep running in the background. Sometimes, when this happens and try to reopen the application again, it will only be crashed. If you find this solve the problem, then make sure you know how correctly tight applications on an Android device. The restart of Android is another way to force stop an app, but it could automatically relaunch at startup. So, it's a good idea to follow this step and make sure the application is actually stopped. Delete app data. How to use an application over time, saves data to a cache to improve performance continuously. Sometimes, these data can get damaged that can cause the application into crash. Sometimes, clear this cache manually can solve the problem. If this doesn't work, you may need to go to the point of starting your Android in recovery mode and select Wipe Cache Partition to completely delete the system cache. Be careful to choose the right options when startup in Android restore mode, because by selecting the wrong options can cause brick (make it unusable) your Android device. Check Apps permissions. If your application has been recently updated, it is possible that app permissions have been fixed again to default on your Android. This can cause anything from an unpredictable behavior to the freezing app entirely. Back to app permissions for this application and make sure it has all the authorizations you need. If you are not sure that permits are needed, give the application of all permissions to test if you resolve the problem. Reinstall the application. If all the rest fails, the application itself may have corrupt files that will not let it work properly. Try uninstalling and reinstalling the app. If you can't find the application on Google Play Store more (if it were an older app that has been removed), you may need to find and install the APK for it, instead. Free the storage space. If all the rest is not successful, it is possible that you don't have enough memory on the Android for the application to work properly. There are several ways to free up space to get the operation of the app again. Try using Android Storage Manager to delete unnecessary files. Delete the old downloadable files that can be eating excessive space. Try moving large files, such as images or movies on an SD card. There are also a lot of great cleaner Android applications that can free up space. Android phone factory restoration. If you are absolutely certain that the application should work well on the version of Android, and you are desperate to get the application to work again, you can always opt for Android phone recovery. Only using this as a last resort, because you need to perform a full backup of Android so you don't miss the important files and contacts. Alternatively, you might consider find an alternative app that does the same thing, but it works properly on your phone. Thank you for letting us know! Tell us because! Whether you moved to a new city or you're ready Get more social in your current place, there is no reason to sit at home alone and hope that something comes. Thanks to some fantastic apps, you can find out what's going on in your area and go out there as soon as others are promoted, see also what your friends are planning to do this weekend so you can tag tag. You can even buy tickets through the app that is free for iOS and Android. Free for iOS alone, now you give you Event information in (per most) in real time. Basically, it makes it taking place from the accounts of the social media of people who are in that event and show images and other information from the participants themselves. Of course, you might find that some events are already finished because nothing is infallible, but if you are out and try to find a party, a concert, a festival, a tasting or practically anything else to do, now you'll find it for you inside And around your exact position, anywhere in the world. If you are really looking for a social experience, the party with a room can be your best option. Available for iOS and Android, you can get in touch with people who are in nearby locations or plan to go to them that day. Plan a party or a Meetup in a local restaurant, club, bar or event. It's a great tool to make friends in a new city. As a local was built to be a travel app, but as it results, the people of the real place is using him more to find out what there is to do in their area. While it is not available in every city, you can buy guides to those you are interested in and using them to locate everything from restaurants and art galleries to parks and museums. The guides are provided by local writers, so it's really an internal appearance within what to do in a community. The app is only available for iOS. Not just gob is a cold app to find things to do in your area, but you can synchronize it to your accounts on social media in order to create a more personalized experience for you. Or you can search manually by selecting the Â ¢ â,¬ Â "things to do ... or Â ¢ â,¬" cold stuff near me today options. It is easy to use and is free for iOS and Android. Dostuff not It is still available for each city, but covers most large in the United States. If you are lucky enough to fall into that category, you love customization this app offers. Create a profile, view the events chosen by local influencers and order the options for category so you can only see those that interest you. It is available for both ios and android. face to face: few people are the right mood for a strong concert every night, but you don't want to spend every night softened in a cafeteria . Sauce lets you choose your local events and other things to do based on your mood. If you have children with you, you could select Â ¢ â,¬ Â ¢ â,¬ Â "PlaytimeÂ ¢ â,¬ mood for Family options, or if you feel energetic, you can select Â ¢ â,¬ Â "illyÂ ¢ â,¬ "showing your concerts, sporting events, bars and clubs. The app is free for both iOS and Android. Field Trip is an app created by Google that works as a background program while spending time in your city. While walking or go around, she presents you with fresh facts and information about the places you pass, including the events that take place there. Set it to be vague or specific as you prefer with details. The app is available for iOS and Android. CC0 / Bernard-Veriutraete / Pixabay If you synchronize the time to enjoy the app with your smartphone calendar, they give you what you can do in your area, but only at Times you 're available. So there are no disappointments because you have a dentist appointment on the day of that MatinÂ © and to the local theater. Unfortunately for Android users, it is only available for iOS. Localmind not only allows you to look for things to do in your area, allows you to ask others that have been questions about the spot. If you want to know if a restaurant has a clothing code or if there is free WiFi at the museum, you will receive your answers in real time from other users. The app is free for iOS and Android.
