Dion Lamar Mills for Byrdie as someone who loves shoes, would you think I own more; Still, my very modest sized closet can easily accommodate my latest collection "if you can also call it so. It's not that I'm trying to save money (even if I probably should), or I have self-control when it comes to shopping (I wish). No, why I can't understand that my fantasy glut shoe is due to another question completely: finished fit and sizing. In my experience, shopping for a couple of fresh kicks is on par with the search for new jeans. He generally starts with a sense of excitement, then he moves to feelings of frustration, and more times he does not end up in disappointment. The thing is that there is no graph of universal sizes to which shoe producers adhere, and this lack of standardization is what represents the inconsistencies in sizing (for example because you are an 8 in a brand and a 9 in another). However, this does not mean that all hope is lost. Thanks to my many shoe disadvents, I collected some tips and tricks to help you take a closer step for the perfect shoe. Read on for a step-by-step guide to measure your feet in inches and find the correct size of the shoes, both for men and women, once and for all. If a brand does not make their shoe size table available, you can be tempted to write them a strongly written letter (or we are real, vent on social media), but it is advisable to measure the feet instead. And it's not just the foot length you should be later, but also width. Although not all shoes refer to their width "often seen as letters that can be decoded to mean" tight "or" wide "à €" should. Know both the length and width is the key to comfort, and with the help of some basic school supplies (we are talking, ruler, paper, pencil, etc.) easy to understand: Stand on a flat surface, so that all your body weight is on your feet. Pressure makes them expand a little. Touch a piece of paper on the floor. Put one foot on the paper, making sure your full weight rests on your feet; rock forward slightly. This helps. the feet spread as they naturally do in shoes.Trace around the foot on the paper. Hold the pen or pencil as straight up and down as possible. (FYI: If you're having trouble balancing, ask your best friend to help you out".That's what friends are for, right?) Flip the sheet, glue it on the floor, and repeat step three with your other foot.On the tracks you've created, using a meter of ribbon or a meter of ruler from your heel to the tip of your longest to Use the following size conversion charts for women's or men's shoes to convert the length of your feet to the corresponding measurement.Using your drawings, measure the width of each foot at the widest point and record the largest number of the two numbers.To compensate for the width of your writing tool, subtract about 1/4 inch (1/2 centimeter) from this size. Check the width charts of women's or men's shoe to determine the width of the foot. It's best to measure your feet at the end of the day, because that's when they're swollen and while you're wearing the kind of socks you're going to wear with your shoes. For example, 11EE is a bit wider than the extra-wide by about 38/100 of an inch, to be exact. Generally, this is the difference between any designation of the width of the next letter. So to put it all together, let's say you measure the length of your foot as 9-1/2 inches long; this gives you a basic measurement of U.S. women's shoes of 8. If you then measure the width to 3-15/16 inches, you get a wide width (A"DA"). This makes your shoe number 8D. Bingo!
