It's a good start as a first try on iPad. Mainly for fast dummies and more. for sound processing. he sleeps well It's also fun to play. Of course, it doesn't replace the DAW on a computer. But now there is one thing that really irritates me: I try to migrate sound events, but often part of the image changes to a fixed scene. At least it would be nice if only audio events were sent when I use a stylus. Then fry it with two fingers or something. I'm really in a crisis right now. Also, I can't select many instancesIn Wahan. Now I have cut my message and pushed 15 traces that were exported via mixus and now I have pushed them to 15 filled ones that I had to save separately using files and then added them to the personal computer. Wow... hi, thank you very much for the friendly assessment of Kubaz and the corresponding review. It's meant to be a mobile platform and should definitely not change our office dow... ;) Nevertheless, we hope the program on the iPad will work, you guessed it. If you work a little more with the program, we hope you do. When sharing files: If you're using a Mac, you can use the Apple File app to send multiple files directly to a step. Thanks again for the note and stay healthy! Dear Cheers good dose .. gar no abound - engime, important features "but unfortunately only striped use is possible .. For example if I want to play 7/8 up to 120 diiys per minute I have to define 7/4 and 240 beats per minute - but 7/8 faster if I want to play? The metronome only increases at 240 bpm and what happens if I play 11/8 or 13/8? If you think you have more), this program is great Hello Pauru_4711, thank you very much for your Cuban coast and your relevant comment., We are doing better to improve everything for every update. Thanks again and bless you, Lars got a program to make metal guitar recording easier. Luckily in advance: import MIDI Drum Run I worked without any problems, even the speed was trying to take over: 1:1. The cute amp simulator looks like top paste. I should have known how to do well (you have to let the following program run in the background - nothing with VST or similar pay-inThere is no deterioration. Unfortunately, it was impossible to take speed, because it was not a denominator, but only part (4/4; 3/4 ...) can be changed. Unfortunately, our song was written 6.8. Until now, I have to rewrite the entire set of drums to match 3/4 at double speed. But now there were changes in time. And it's over. I cannot use this program for your purposes, because you cannot program changes in time and change in speed. So unhappy; I have no idea that the iPad cannot technically. To resolve the speed and changes in the future update (as in the case of Tempo Trail, as if it were in a real kubas for a long time). 5 Hi Nitocin666 Stars, thanks for the rating and the corresponding comment. In the description of the program and we try to better determine the existing functions on our website. Supporting speed and changing the bands in our list of future updates. However, from the complexity it cannot be assumed that this function can be performed in a short or medium -term period. Nevertheless, we are trying to improve Kubaz with each update, and the new version is already preparing.
